

Collab's IN HOUSE TRAINING

We would like to invite those interested to join us for a behavioural simulation on water management under uncertainty in the Mijares (Spain). This is a trial simulation that has recently been developed for the UNDUE project (under CoLab: <https://www.sciencecollab.org/ongoing>). The simulation will be a participatory role-play exercise looking at how different actors, interests and conflicts can form decision-making in a region dealing with multiple complex issues such as water scarcity, forest fires and climate change. The simulation will take place in the **Txuriena Room** on **Wednesday 22nd of November** from **10:00 to 13:00**. This will be a fantastic opportunity to learn about how participatory games can be used in the context of decision-making on climate change as well as experiencing how it feels to be a part of a multi-actor decision-making process. Topics that are strongly linked with what was addressed in last week's great symposium.

For those interested, please sign up using the following [link](#).
